

Instrument Set 5

Minimized Set for Surgical Crown Extension

Surgical crown extension can be meaningful or necessary for various reasons.

Medical indications include caries extending deeply underneath the gingiva, insufficient hold of existing crowns and fractures.

If too much gingiva is visible (“gummy smile”) and the dental crown appears to be too short as a result, surgical crown lengthening may be indicated for aesthetic reasons. The targeted, cosmetic-surgical intervention can indeed do a lot to restore naturalness and harmony to the smile.

The minimized set for surgical crown extension offers users a straightforward arrangement of instruments that are simply ideal for optimally detaching the marginal gingiva from the tooth across its entire width and carefully remove the exposed alveolar bone.

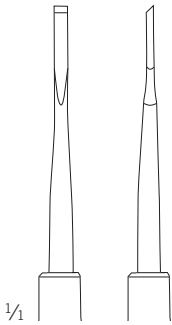

Set 5: Minimized Set for Surgical Crown Extension
consisting of:

Item No.	Qty	Designation
43-700-01-07	1	Back Action, Iglhaut, Fig. 1
43-700-02-07	1	Back Action, Iglhaut, Fig. 2
43-700-03-07	1	Back Action, Iglhaut, Fig. 3
43-700-04-07	1	Back Action, Iglhaut, Fig. 4
23-320-01-07	1	Bone curette, Iglhaut

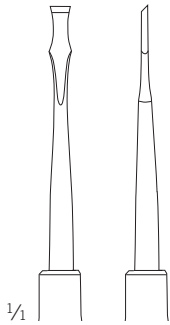

MiniSet sterile container MicroStop®		
55-861-50-04	1	Container 310 x 189 x 70 mm
Accessories container		
55-864-01-04	1	Coding label for cover, with text: Minimized set for surgical crown extension
55-864-05-04	1	Coding label for front, with text: Minimized set for surgical crown extension
55-864-13-04	1	Logistics framelets for cover, blue

Mesh tray		
55-015-10-01	1	Mesh tray 277 x 171 x 30 mm
Accessories mesh tray		
55-004-03-04	2	Bottom strip for instrument fixation, transverse, 162 mm
55-005-02-04	2	Plug-in element without support (16/pack)
55-006-02-04	1	Spring element, transverse, 162 mm
55-008-01-04	1	Stop frame, transverse, 162 mm
