The image features a white medical seton, a type of suture used for drainage. On the left, a traditional seton is shown with a complex, tangled knot in its white cord. On the right, a 'Superseton' is shown, which is a smooth, knotless version of the same device. The background is split horizontally into a white top half and a dark blue bottom half, with a thick yellow curved band separating the two. The text is positioned in the white and blue areas.

**Because life
without knots is
just a lot more
comfortable...**

Currently, setons have knots that create pain, irritation and discomfort for your patients. Not only does this often limit patients' mobility in work, sports, going out and lovemaking, but it can create further complications, leading to increased hospital visits and higher costs.

The knotless Superseton is a smooth, simple and secure solution that prevents unnecessary irritation and discomfort for your patients. In fact, it will significantly increase your patients' mobility and quality of life.

SuperSeton
Smooth, simple, secure.

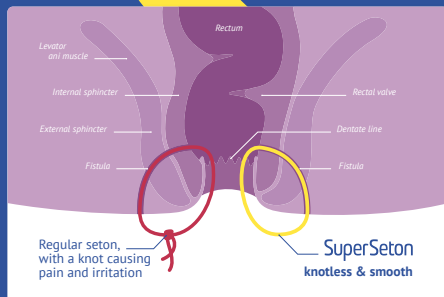

Increasing mobility and quality of life for your patients

Smooth, simple, secure

Knotless and smooth, SuperSeton features an innovative closure that is secure and flexible, and can be applied manually within seconds with the patented disposable applicator. While the clever design offers numerous benefits, it still fits seamlessly with established practice.

SuperSeton truly makes treating patients **quicker, easier and more efficient.**

SuperSeton

Smooth, simple, secure.
